

ABA:1524

S0

The image shows a blue brain scan slice on a black background. A vertical black line runs through the center of the brain, likely representing a midline or a specific anatomical feature. The brain is divided into two main hemispheres by this line. The slice is labeled 'ABA:1524' in the top left corner and 'S0' in the bottom left corner. A horizontal white line crosses the brain slice, and two vertical white lines are also present, one on each side of the central vertical line.
