SCN

The image shows a coronal section of a brain, likely from a rodent, with two large, symmetrical, blue-stained regions. These regions are located in the lateral areas of the brain, possibly representing the suprachiasmatic nucleus (SCN) or a similar structure. The staining is uniform in color and intensity across both sides. A vertical line runs down the center of the image, and a horizontal line runs across the middle, intersecting at the center of the brain section.
