SPa ventral

This fluorescence microscopy image shows a SPa ventral structure. The image is divided into four quadrants by a vertical and a horizontal white line. The left half of the image displays a bright, curved, and somewhat irregular structure, likely representing the ventral part of the SPa. This structure is primarily blue, with several distinct yellow and green spots indicating areas of higher fluorescence intensity. The right half of the image is mostly dark blue, suggesting a lower level of fluorescence or a different structural component. The overall shape of the structure on the left is roughly circular or oval, with some internal detail visible despite the low resolution.
