ME

The image displays a coronal cross-section of a brain. A vertical white line divides the image into two hemispheres. A horizontal white line is positioned near the bottom. The brain tissue is represented by a blue, textured area. A small, bright, multi-colored spot (red, orange, yellow, green, blue) is located in the upper central region, just above the horizontal line and slightly to the right of the vertical line. This spot indicates a localized area of high intensity or activity.
