IC

A blue brain scan image, likely a PET or SPECT scan, showing a coronal cross-section of a human brain. The image is centered on a black background. A white crosshair is overlaid on the image, with a vertical line and a horizontal line intersecting at the center. The brain tissue is represented by a solid blue color. There is a small, brighter blue spot on the left side of the image, which could indicate a specific area of interest or a lesion. The overall shape of the brain is roughly oval, with some internal structures visible as darker blue or black areas.
