OB anterior

This image is a fluorescence micrograph of a brain section. It features two distinct, bright blue fluorescent spots located symmetrically on either side of a central vertical axis. A horizontal white line and a vertical white line intersect at the center of the image, forming a crosshair that serves as a reference for the anatomical orientation. The spots appear to be localized within specific brain regions, likely the olfactory bulbs, given the 'OB' label. The background is dark, indicating low autofluorescence or specific staining of the target structures.
