VMH

The image displays a coronal section of a brain scan. A vertical white line and a horizontal white line intersect at the center, dividing the image into four quadrants. The brain tissue is represented by various shades of blue, indicating different levels of activity or density. A prominent, localized area of high activity is visible in the upper-left quadrant, characterized by a color gradient from blue to yellow and red. This area is situated in the medial frontal region, likely corresponding to the ventral medial hypothalamus (VMH). The rest of the brain area shown is predominantly blue, with some minor, less intense blue spots scattered throughout.
