SPa ventral

This fluorescence microscopy image shows a ventral view of a SPa. The image is divided into two main regions by a vertical line. The left region shows a complex pattern of blue and cyan fluorescence, with a prominent bright cyan spot in the upper left and a smaller, less intense spot in the lower left. The right region is predominantly dark blue, indicating a different fluorescence profile. A horizontal line crosses the image, and a vertical line runs down the center, creating a grid-like structure.
