

ABA: 70445455

VPM/VPL

This figure is an axial brain scan, likely a PET or SPECT image, showing functional activity. The brain is represented as a blue silhouette against a black background. Two distinct areas of increased activity are highlighted in yellow and green. One area is located in the posterior region, corresponding to the VPM/VPL (Primary Somatosensory and Primary Visual Cortex/Primary Visual Cortex). The other area is located in the anterior region, corresponding to the ABA (Anterior Basal Ganglia). The image is overlaid with a white grid.
