Tg

The image displays a fluorescence microscopy scan of a plant tissue section. The tissue is stained with a blue fluorescent marker, likely DAPI, which highlights the nuclei of cells. The tissue is roughly oval-shaped and is divided into four quadrants by a white crosshair. The fluorescence is most intense in the lower half of the image, where several bright, distinct spots are visible, possibly indicating areas of high cell density or specific cellular structures. The upper half of the image shows a more uniform, though still bright, blue fluorescence. The background is black, providing a high contrast for the blue-stained tissue.
