VMH

This is a fluorescence microscopy image of a brain section, likely from a rodent, showing the ventral medial hypothalamus (VMH). The image is presented in a false-color format where blue indicates low fluorescence intensity and yellow/green indicates high intensity. A prominent, bright yellow-green spot is visible in the lower-left quadrant of the image, representing a region of high fluorescence. The rest of the brain tissue shows a more uniform, lower-level blue fluorescence. A white crosshair is overlaid on the image, with the vertical line passing through the center and the horizontal line passing through the lower portion of the brain section.
