SPa dorsal

This is a coronal brain scan image, likely a PET or SPECT scan, showing a cross-section of the brain. The image is predominantly blue, indicating low signal intensity. A single, small, bright yellow-green spot is visible in the center, representing a focal area of high signal intensity. The brain's anatomical structure is roughly outlined by the blue area. A white crosshair is overlaid on the image, with the vertical line passing through the center of the bright spot and the horizontal line passing through the middle of the brain section.
