SCN

The image shows a coronal section of a brain against a black background. Two large, roughly circular regions are highlighted in a solid blue color, positioned symmetrically on either side of a central vertical line. A horizontal white line crosses the lower portion of the brain, and a vertical white line runs through the center, intersecting the horizontal one. The blue regions appear to be located in the lateral areas of the brain, possibly representing specific nuclei or areas of interest in a neuroanatomical study.
