CA1

This is a fluorescence microscopy image of a brain section, likely from a rodent, showing the CA1 region of the hippocampus. The image is divided into four quadrants by a vertical and a horizontal white line. The CA1 region is highlighted in blue, indicating a specific area of interest. A bright, localized blue spot is visible in the upper left quadrant, suggesting a high concentration of the fluorescent signal. The rest of the brain section is dark, with some faint blue staining visible in the lower left quadrant.
