VMH

The image displays a coronal section of a brain, likely from a rodent, with a blue fluorescent signal. The signal is concentrated in a small, bright spot on the left side of the image, which corresponds to the VMH (ventral medial hypothalamus) region. The rest of the brain tissue shows a uniform, low-level blue fluorescence. A vertical white line runs down the center of the image, and a horizontal white line runs across the middle, intersecting at the center of the brain section.
