A posterior

This is an axial PET scan of the brain. The image shows a cross-section of the brain with a color scale where blue represents low metabolic activity and red/yellow represents high metabolic activity. There are prominent, symmetrical areas of high metabolic activity (red/yellow) in the posterior regions of both hemispheres, specifically in the parietal and occipital lobes. The rest of the brain tissue appears mostly blue, indicating lower metabolic activity. A vertical white line is drawn through the center of the brain, and a horizontal white line is drawn below the brain image.
