DG

This is an axial PET scan of a human brain. The image shows a cross-section with various regions of metabolic activity. The most prominent features are two large, bright yellow and red areas in the lower half of the image, representing the posterior horns of the lateral ventricles. There are also smaller, less intense areas of activity in the upper half, near the frontal horns. The background is a uniform blue, indicating low metabolic activity. A white crosshair is overlaid on the image, with the vertical line passing through the center of the brain and the horizontal line passing through the middle of the image.
