SPa dorsal

The image displays a blue fluorescence pattern on a black background, representing a SPa dorsal structure. The pattern is roughly circular and is divided into four quadrants by a vertical and a horizontal white line. A prominent, bright blue spot is located in the upper-left quadrant. Several smaller, dimmer blue spots are visible in the upper-right quadrant, and a single small spot is located on the vertical line in the lower-right quadrant. The overall shape of the fluorescence is irregular, with some darker areas at the bottom.
