

ABA: 73817422

ventral S

This is a coronal PET scan of a human brain. The image displays metabolic activity using a color scale where blue represents low activity and yellow/orange represents high activity. The cerebral cortex, particularly in the frontal and parietal regions, shows a prominent ring of high activity. The central sulci and the cerebellum at the base of the brain show lower activity levels. A vertical white line is positioned in the center of the image, and a horizontal white line crosses the middle of the brain.
