LH

This is an axial PET scan of a human brain. The image shows a cross-section of the brain with a color scale from blue (low activity) to red (high activity). A prominent, bright red area is visible in the left hemisphere, indicating a focal area of increased metabolic activity. The rest of the brain shows relatively uniform, lower-level activity represented by blue and green colors. A vertical white line is drawn through the center of the brain, and a horizontal white line is drawn across the middle, intersecting at the center of the focal area.
