

ABA:74579422

SPa ventral

This fluorescence microscopy image displays two large, roughly circular blue fluorescent regions against a black background. The regions are positioned on either side of a central vertical gap. A thin white vertical line runs through the center, and a thin white horizontal line crosses the middle of the image, intersecting at the center of the gap. The blue fluorescence appears to be distributed throughout the volume of these two structures, with some brighter spots visible within the left structure.
