

ABA:75147762

A anterior

The image displays a fluorescence micrograph of a Drosophila embryo. The overall shape is roughly oval. A central vertical line of dark, non-fluorescent tissue runs down the middle. The surrounding tissue is filled with a blue fluorescent signal. At the anterior end (bottom of the image), there are two distinct, bright spots of fluorescence, one on each side of the central midline. A horizontal white line crosses the image at the level of these two spots. A vertical white line runs through the center of the embryo, passing through the midline. The text 'ABA:75147762' is located in the top left corner, and 'A anterior' is in the bottom left corner.
