

ABA:75147766

SN

This is an axial PET scan of a human brain. The image shows a cross-section of the brain with a color scale where blue represents low uptake and yellow/red represents high uptake. A prominent, focal area of increased uptake is visible in the posterior cingulate cortex, located in the midline posterior region of the brain. The rest of the brain shows relatively low, uniform uptake. A white crosshair is overlaid on the image, with the vertical line passing through the center of the focal uptake area. The text 'ABA:75147766' is in the top left, and 'SN' is in the bottom left.
