M

This is an astronomical image, likely a radio continuum map, showing a celestial object. The image is divided into four quadrants by a white crosshair. The left half of the image shows a bright, compact core of emission, colored in a gradient from blue to yellow and red, indicating high intensity. The right half of the image shows a much fainter, more diffuse emission, primarily in blue. The overall shape of the emission is roughly circular, with some internal structure visible on the left side.
