This is an axial PET scan of a human brain. The image displays a cross-section of the brain with a color scale where blue represents low metabolic activity and red/yellow represents high metabolic activity. A prominent, localized area of high activity is visible in the left frontal lobe, indicated by a red and yellow cluster. The rest of the brain shows relatively uniform, low-level activity represented by blue and cyan tones. A white crosshair is overlaid on the image, with the vertical line passing through the center of the high-activity region.
