

ABA:77332686

DM

This fluorescence microscopy image displays a plant root tip, likely from Arabidopsis, stained with a fluorescent marker. The image is characterized by a dark background with bright, localized spots of fluorescence. A prominent, bright yellow-green spot is visible in the lower central region, indicating a high concentration of the fluorescent signal. Several smaller, less intense spots are scattered throughout the root tip, particularly in the lower half. A white crosshair is overlaid on the image, with the vertical line passing through the center of the root and the horizontal line intersecting the lower part of the root. The text 'ABA:77332686' is located in the top left corner, and 'DM' is in the bottom left corner.
