CA2/CA3

This is a fluorescence microscopy image of a brain section, specifically highlighting the CA2/CA3 region. The image is divided into four quadrants by a white crosshair. The left half of the image shows a bright, irregularly shaped area of fluorescence, primarily in shades of blue and cyan, indicating a high concentration of the fluorescent signal. The right half of the image is mostly dark, with some faint, diffuse fluorescence visible. The overall shape of the fluorescent area on the left suggests it is a specific anatomical region of the brain.
