OB anterior

This image is a fluorescence micrograph of a brain section. It features two distinct, bright blue fluorescent regions located symmetrically on either side of a central vertical axis. A horizontal white line and a vertical white line intersect at the center of the image, forming a crosshair. The fluorescent regions appear to be localized within specific anatomical structures, possibly the olfactory bulbs, given the 'OB' label. The background is dark, and the overall image has a slightly grainy texture typical of fluorescence microscopy.
